

# Turn these lemur hands into turkeys!

true to life size!

**red-ruffed lemur (foot)**  
(*Varecia rubra*)

Fun fact: The tops of lemur hands and feet are covered in fur, but the bottoms are hairless skin just like ours! That means lemurs can make great hand and footprints.

**fat-tailed dwarf lemur (foot)**  
(*Cheirogaleus medius*)

The scientific name for dwarf lemurs, *Cheirogaleus*, comes from the Greek words for hand (cheir) and weasel (gale), making them hand weasels!

**ring-tailed lemur (foot)**  
(*Lemur catta*)

Fun fact: Lemurs have fingernails on their hands and feet, except for their second toe, which has a grooming claw useful for cleaning out their ears.
