

Turn these lemur hands into turkeys!

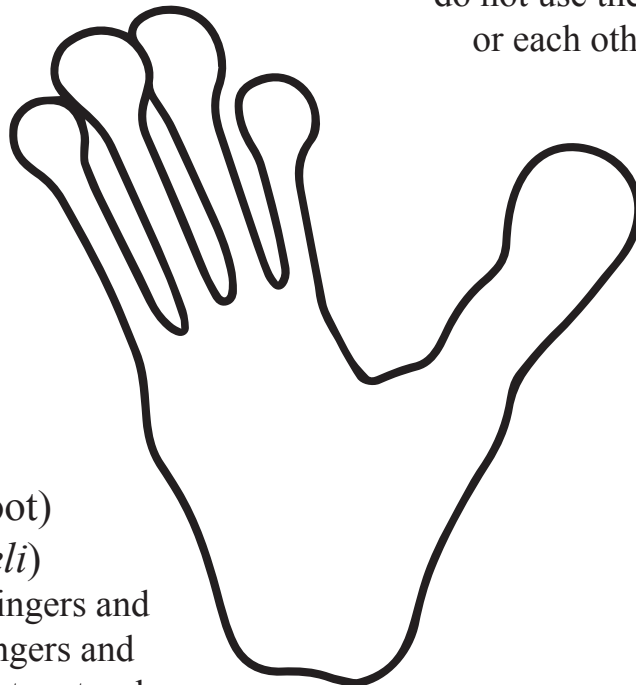

Sunda slow loris (hand)
(*Nycticebus coucang*)

Fun fact: Hold on, this isn't a lemur! Lorises are lemur relatives that live in Southeast Asia. Like lemurs, lorises have 10 fingers, 10 toes, opposable thumbs, big toes, and a grooming claw on their second toes.

collared lemur (hand)
(*Eulemur collaris*)

Fun fact: Lemur hands are good for lots of things, but not for grooming. Lemurs do not use their fingers to groom themselves or each other, but rather use their teeth!

Coquerel's sifaka (foot)
(*Propithecus coquereli*)

Fun fact: Sifakas are vertical clingers and leapers. They use their long fingers and big toes and thumbs to grab on to tree trunks as they bounce between the trees.
